

ENVIRONMENTAL POLICY

Gärtnäs AB develops, manufactures and markets functional furniture of high quality, design and durability with the help of well known designers and experienced staff. We consider an active environmental policy to be a self-evident part of all the company's processes.

- When purchasing input materials and chemicals we will choose alternatives that as far as possible are recyclable and environmentally compatible.
- We will incorporate our energy and raw materials resources into our design- and product development so as to maximise the durability, ergonomics and lifespan of our furniture.
- We will actively work to reduce our consumption of fossil fuels for transport purposes by means of good logistical planning, load optimisation of goods transports, and the environmental adaptation of vehicles, fuel and driving behaviour.
- We will use at least 90% biofuel to heat our workshop.
- We will actively work with environmentally compatible residue- and waste handling within the company and promote a high level of recycling.
- We will actively work to minimise and phase out dangerous chemicals and replace them with environmentally compatible alternatives that are technically and economically defensible.
- We will work to prevent pollution by maintaining and servicing our machinery and equipment and by handling chemicals safely.
- We will work on a long-term basis with our improvement efforts, which will comply with the relevant internal and external requirements and legislation that apply to the company's environmental aspects.

Dag Klockby,
CEO

Gärtnäs SINCE 1893
